

AI Usage Policy

Document Owner: Madhulata Solutions

Effective Date: [Insert Date]

Version: 1.0

1. Purpose

Madhulata Solutions ("Company", "we", "our", or "us") recognizes the transformative potential of Artificial Intelligence (AI) technologies in delivering innovative consulting services, software solutions, and operational efficiencies.

This AI Usage Policy establishes the standards and requirements governing the responsible, secure, ethical, and lawful use of AI technologies by employees, contractors, consultants, interns, and authorized third parties acting on behalf of Madhulata Solutions.

The objectives of this policy are to:

- Promote responsible AI adoption.
 - Protect client confidentiality.
 - Reduce legal, ethical, and cybersecurity risks.
 - Ensure appropriate human oversight.
 - Maintain compliance with contractual, regulatory, and professional obligations.
-

2. Scope

This policy applies to:

- Employees
- Contractors
- Consultants
- Interns
- Temporary staff
- Third-party personnel authorized to use AI systems on behalf of Madhulata Solutions

This policy covers all AI technologies used for business purposes, including but not limited to:

- Large Language Models (LLMs)
- Generative AI
- AI assistants
- AI coding assistants

- AI agents
 - Retrieval-Augmented Generation (RAG) systems
 - Machine Learning models
 - Deep Learning models
 - Natural Language Processing (NLP) systems
 - Computer Vision systems
 - AI-powered automation tools
 - AI APIs and cloud AI services
-

3. Approved Use of AI

AI technologies may be used to support legitimate business activities, including:

- Software development
- Code generation and refactoring
- Technical documentation
- Requirements analysis
- Research and knowledge discovery
- Data analysis
- Workflow automation
- AI solution development
- Rapid prototyping
- Testing assistance
- Content drafting
- Client solution design
- Internal productivity improvements

AI shall be used to assist—not replace—professional expertise and judgment.

4. Human Oversight

AI-generated outputs shall be reviewed by qualified personnel before being relied upon for:

- Client deliverables
- Technical documentation
- Software releases

- Security recommendations
- Legal or contractual documents
- Business decisions
- Financial analysis
- Regulatory submissions

Employees remain responsible for the accuracy, quality, and appropriateness of work produced with AI assistance.

5. Confidentiality and Client Data

Personnel shall protect confidential information when using AI technologies.

Unless expressly authorized by the client or permitted by contract:

- Client confidential information shall not be entered into publicly accessible AI platforms.
- Personally identifiable information (PII) shall not be shared with unauthorized AI services.
- Proprietary source code shall not be uploaded to AI services that may retain or use submitted content for model training.
- API keys, passwords, encryption keys, authentication credentials, and other secrets shall never be submitted to AI tools.

Where approved enterprise AI services are used, personnel shall follow applicable security, privacy, and contractual requirements.

6. Acceptable AI Use

Examples of acceptable AI use include:

- Generating boilerplate code
- Explaining programming concepts
- Drafting documentation
- Summarizing technical materials
- Creating presentation outlines
- Assisting with data analysis
- Generating software test cases
- Brainstorming solution approaches
- Producing internal knowledge articles
- Supporting AI solution development

All AI-generated work should be validated before use.

7. Prohibited AI Use

Personnel shall not use AI technologies to:

- Generate fraudulent or deceptive content.
- Create malicious software or facilitate unauthorized access.
- Process confidential client information without authorization.
- Circumvent Company security controls.
- Produce discriminatory, abusive, or unlawful content.
- Infringe intellectual property rights.
- Misrepresent AI-generated work as independently verified where review has not occurred.
- Violate contractual, legal, or regulatory obligations.

The use of AI for illegal, unethical, or unauthorized activities is strictly prohibited.

8. Verification of AI Outputs

AI-generated content may contain inaccuracies, outdated information, fabricated references, or incorrect conclusions.

Accordingly:

- Outputs shall be reviewed for accuracy.
- Technical recommendations shall be validated.
- Generated code shall undergo testing and code review.
- Security recommendations shall be independently assessed.
- Sources should be verified where factual accuracy is required.
- Significant client-facing outputs shall receive appropriate human review.

Personnel shall not rely solely on AI-generated information for critical decisions.

9. Intellectual Property

Personnel shall respect intellectual property rights when using AI systems.

Employees shall:

- Avoid reproducing copyrighted material without authorization.
- Respect software licensing requirements.

- Ensure deliverables do not knowingly infringe third-party intellectual property.
- Follow Company intellectual property policies.

Ownership of client deliverables shall be governed by applicable contracts and agreements.

10. AI Model Selection

Only AI services approved by Madhulata Solutions should be used for Company business where approval processes exist.

Before adopting a new AI tool, consideration should be given to:

- Security controls
- Privacy practices
- Data retention policies
- Regulatory compliance
- Vendor reputation
- Contractual obligations
- Integration requirements
- Business suitability

Unapproved AI platforms shall not be used to process confidential or sensitive information.

11. Prompt Management

Personnel shall exercise care when creating and managing prompts.

Prompts should:

- Avoid unnecessary disclosure of confidential information.
- Be written clearly and professionally.
- Be stored securely when they contain proprietary methodologies.
- Be treated as Company intellectual property where developed for business purposes.

Where prompts form part of client deliverables or reusable frameworks, they shall be managed in accordance with Company documentation and version control practices.

12. AI Security

Personnel shall follow secure practices when using AI technologies, including:

- Protecting API keys and credentials.
- Using secure authentication methods.

- Applying role-based access controls where available.
- Monitoring AI usage where appropriate.
- Reporting suspected misuse or security incidents promptly.

AI systems shall be configured to minimize unauthorized access to sensitive information.

13. AI Development Standards

When developing AI-powered applications or solutions, project teams should:

- Apply secure software development practices.
 - Evaluate model performance.
 - Test AI outputs.
 - Assess potential bias.
 - Document system limitations.
 - Monitor deployed models.
 - Maintain version control.
 - Implement appropriate logging where feasible.
 - Include mechanisms for human oversight where appropriate.
-

14. Compliance with Laws and Regulations

Personnel shall use AI technologies in compliance with:

- Applicable privacy and data protection laws.
 - Intellectual property laws.
 - Contractual obligations.
 - Export control regulations where applicable.
 - Industry standards.
 - Client security requirements.
 - Company policies and procedures.
-

15. Incident Reporting

Any actual or suspected AI-related incident shall be reported promptly.

Examples include:

- Unauthorized disclosure of confidential information.

- AI-generated harmful or inappropriate outputs.
- Security vulnerabilities involving AI systems.
- Misuse of AI technologies.
- Prompt injection or data leakage incidents.
- Unauthorized use of AI services.
- Unexpected model behavior affecting client deliverables.

Reported incidents shall be investigated in accordance with the Company's Incident Response Policy.

16. Training and Awareness

Personnel using AI technologies shall receive appropriate awareness and training covering:

- Responsible AI use.
- Prompt engineering best practices.
- AI security considerations.
- Privacy and confidentiality requirements.
- Verification of AI-generated outputs.
- Ethical AI principles.
- Client data protection obligations.

Training should be refreshed periodically to address evolving technologies and emerging risks.

17. Responsibilities

Management

Management shall:

- Promote responsible AI adoption.
 - Approve AI technologies where required.
 - Allocate appropriate resources for governance and training.
 - Support compliance with this policy.
-

Employees and Contractors

Personnel are responsible for:

- Following this policy.
- Protecting confidential information.

- Reviewing AI-generated outputs.
 - Reporting AI-related incidents.
 - Using only authorized AI services for business purposes.
 - Completing required AI awareness training.
-

18. Compliance

Failure to comply with this policy may result in disciplinary action, suspension of system access, termination of employment or engagement, contractual remedies, or other actions as appropriate under Company policies and applicable laws.

19. Policy Review

This policy shall be reviewed at least annually, or sooner if required due to changes in:

- AI technologies
- Business operations
- Client requirements
- Regulatory developments
- Security risks
- Industry best practices

Updates shall be approved by authorized management.
